

Reduced Man-Hour Cost and Assured Harness Integrity

Reduce downtime and increase shop efficiencies with Co-Operative Industries' Wiring Harness Testing Systems. Our Automated Harness Tester offers accurate and reliable continuity, high voltage insulation resistance, high potential, capacitance, and passive component testing in one flexible package.

Each unit can be customized based upon tester configuration and software requirements. For effective testing, we supply test harnesses that are designed to match your specific applications. In addition to high quality equipment, you can count on the added value of reliable program and interface support.

Advantages

- Improved Shop Efficiency
- More Accurate Than Manual Testing
- Guaranteed Repeatable Results
- Customized Software and Test Harness Configurations
- Proven Aerospace Technology

Features

- Custom system configurations, test harnesses, and interfaces.
- Software programmed for your specific application.
- Insulation resistance testing capabilities of up to 1500 volts DC, range 5 to 1000 megohms.
- Kelvin (four-wire) resistance measurements down to 0.001 ohm.
- SPC data collection / custom reporting.
- Date, time and user ID stamping.
- 1000 volt AC HiPot capability.
- Optional multi-station feature allows multiple test stations running separate test programs to share a single controller.
- Windows based operating system and user interface.
- Features may vary, depending upon the test system configuration.
- Network able.
